the 2008 physics education research conference brought together researchers studying a wide variety of topics in physics education the conference theme was physics education research with diverse student populations researchers specializing in diversity issues were invited to help establish a dialog and spur discussion about how the results from this work can inform the physics education research community the organizers encouraged physics education researchers who are

using research based instructional materials with non traditional students at either the pre college level or the college level to share their experiences as instructors and researchers in these classes

the purpose of the research was to determine whether phet simulation labs or hands on labs were more effective in helping students learn physics concepts this measure was done by comparing quiz scores using recall calculation and transfer questions additionally student perceptions of learning from both hands on and simulation lab experiences were measured six labs were conducted with high school physics students on the topics of momentum energy circuits angular momentum pendulums and friction it was found that phet simulation labs were as effective at creating student understanding and sometimes more effective as measured by quizzes given after the labs additionally the survey data revealed that students were more engaged by hands on lab experiences and viewed the hands on labs to be more effective than the simulation labs
