this book analyzes major ethical issues surrounding the use of climate engineering particularly solar radiation management srm techniques which have the potential to reduce some risks of anthropogenic climate change but also carry their own risks of harm and injustice the book argues that we should approach the ethics of climate engineering via non ideal theory which investigates what justice requires given the fact that many parties have failed to comply with their duty to mitigate greenhouse gas emissions specifically it argues that climate justice should be approached comparatively evaluating the relative justice or injustice of feasible policies under conditions that are likely to hold within relevant timeframes likely near future conditions include pessimistic scenarios in which no available option avoids serious ethical problems the book contends that certain uses of srm can be ethically defensible in some pessimistic scenarios this is the first book devoted to the many ethical issues surrounding climate engineering

this book constitutes the refereed proceedings of the ifip wg 8 2 and wg 9 4 joint working conference on after latour globalisation inequity and climate change ifipjwc 2023 held in hyderabad india during december 7 8 2023 the 15 full papers presented together with 13 short papers were carefully reviewed and selected from 60 submissions they are organized in topical sections as follows climate change and digital sustainability ict s and sustainable development is in the education sector privacy trust and surveillance theories and methods

climate change is increasingly recognized as a global threat and is already contributing to record breaking hurricanes and heat waves to prevent the worst impacts attention is now turning to climate engineering the intentional large scale modification of the environment to reduce the impact of climate change the two principal methods involve removing some carbon dioxide from the atmosphere which could consume huge amounts of land and money and take a long period of time and reducing the amount of solar radiation reaching the earth s surface perhaps by spraying aerosols into the upper atmosphere from airplanes which could be done quickly but is risky and highly controversial this is the first book to focus on the legal aspects of these technologies what government approvals would be needed how liability would be assessed and compensation provided if something goes wrong and how a governance system could be structured and agreed internationally
